

Solix Common Data Platform Admin Course

Certified Administrator Training for the Solix Common Data Platform (CDP)

As enterprises centralize data governance, archiving, and access control on the Solix Common Data Platform, organizations need administrators who can confidently manage the full user, application, and metadata lifecycle. This course certifies you as a Solix CDP Administrator covering platform overview, role-based access, data ingestion, entity-level access control, and the tools used to manage data access.

Recommended Audience

Database Administrators (DBAs), System Administrators, IT Managers, Data Governance Leads, and Application/Access Administrators responsible for operating the Solix CDP environment.

Pre-Required Skills

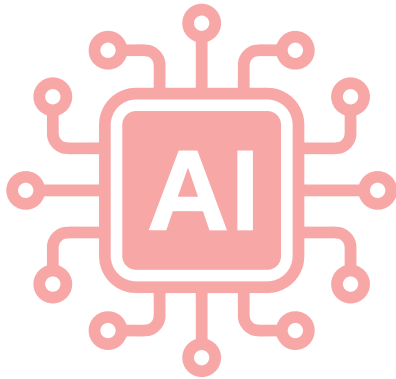

IT Knowledge, Archiving concepts, SQL Skills, Database knowledge, Software administration skills, Linux and Windows server setup, DevOps tools, BigData administration, Network understanding.

Course Highlights

- **Module 1: SCDP Administration Essentials** — Navigate, configure and manage: platform/admin hierarchy, applications, KBs, Sources/Targets, storage, data connections, extraction parameters, SSO/AD, Email Server and system configuration.
- **Module 2: Secure Access & RBAC** — Control who can access what: users, profiles, roles, privilege groups, RBAC, application access, Entity permissions and bottom-up/backend security.
- **Module 3: Data Ingestion & Knowledge Bases** — Connect, ingest and validate: structured/unstructured Sources/Targets, KB population, storage backends (S3/S3A, Azure Data Lake, Dell ECS, Kafka), migration workflows and V1-V9 validation.

Learning Outcome

By the end of the course, learners will be able to confidently administer the Solix CDP platform, configure secure user and data access, manage ingestion and Knowledge Bases, govern metadata, use data access and reporting tools, and support platform administration, monitoring, migration, scheduling, and controlled release activities.

- **Module 4: Entity-Based Data Governance** — Protect data at the right level: Entities, data-object mapping, user/group mapping, granular access, Metadata Repository, Metadata Columns/Rules, Approval Policies and governance.
- **Module 5: Data Access, Reporting & Operations** — Search, analyze, monitor and release: Search Forms, Reports SQL Editor, EBRs, Metadata Audit/Service Reports, cleanup, datatype mapping, Schema Sync, Custom DB Queries, logs, Status Monitor, KB Export/Import, bulk migration, Dev/QA/PROD promotion, Scheduler and Holiday/Outage management.
